PROJECT STATUS REPORT

Project Name	Humanities and Engineering Special Interest Group (SIG, CEEA) Networking Platform Project
For Week Ending	March 1, 2024
Project Status	Yellowish
Status Description	We wanted to be done with members' profile sections by now but we are having slight issues. We are hoping to get it resolved during the weekend to get things back to green

Activities—During the Past Week

This week we started by giving each other a little time to explore and understand WordPress. Afterward, we held meetings to set up our WordPress project, assign responsibilities for the week, and check up to determine our progress. The activities that were worked on this past week were:

Stephanie Ndulue - Navigation bar and footer using the "Elementor Header & Footer Builder" plugin, the home page using the Elementor default widget builder, and the Events page using "The Events Calendar" plugin.

Jiwoun Kim - Has been setting up the WordPress development environment and implementing member components (list members and map projection of members' locations). Installed 'User Registration' to customize member profile, sign up, and login components.

Vishva Shah - Has been actively learning about the WordPress environment and working on implementing a member profile component using Elementor widgets, custom HTML, and CSS. I am currently exploring more effective design approaches for the page.

Pratik Gadhiya - Has been learning and developing the WordPress environment and working on login and sign-up / Registration page by using Elementor widgets, Custom HTML & CSS and Installed 'Forminator' plugin for future help in these pages.

Activities—Planned for Next Week

These are the activities that will be done next week by team members:

Stephanie Ndulue: Work on the about and contact page, and look into the research interest page and how the setup will be like on the back end

Jiwoun Kim: Finish up the member location projection on the map and member list components. Explore plugins

Pratik Gadhiya: Try to finish Login and Sign-up / Registration completely and explore more plugins.

Vishva Shah: Try to complete the member profile page and update the profile page.

Project Issues

To implement the switching languages function between English and French, we need to use local storage Browser API via Javascript. However, under the WordPress environment it takes time to get how to implement it. It seems to have to move the schedule for the function after the MVP.

Project Changes

The communications section of the website was removed according to the customer's request as it was deemed confusing and a feature that might not be used often.

Functionality was given precedence over strictly sticking to our prototype design because of the constraints of WordPress.
